

# EUR Token - Whitepaper

## 1. Introduction

EUR Token is a Solana-based stablecoin inspired by the Euro. It aims to provide a fast, permissionless, and decentralized way to store and transfer value on the Solana blockchain.

Unlike centralized stablecoins, EUR Token is fully on-chain, allowing anyone to access euro-denominated value without intermediaries.

## 2. Token Details

- Token Name: EUR Token
- Symbol: EUR
- Chain: Solana
- Mint Address: 5PYkWB4KsdJo91g82HEWRwQcxDB3WtSDExgVF6smtCYi
- Decimals: 6
- Total Supply: 100,000,000 EUR

## 3. Use Cases

- DeFi integrations for euro-based lending and swaps
- Payments and remittances on-chain
- Euro-denominated savings and accounting in dApps

## 4. Liquidity & Swaps

EUR is available for trading via Raydium and Jupiter Aggregator on the Solana blockchain. Users can provide liquidity and swap directly with USDT and other SPL assets.
